2015 CIRP Freshman Survey

Institutional Profile Reports

University of California-Los Angeles

Comparison group 1:   Public Universities-high selectivity
Comparison group 2:   Public Universities

How to Read the Institutional Profile Report

The Institutional Profile provides comprehensive information on your incoming first-year students as well as national normative data for similar types of schools. Topics covered include: secondary school achievement and activities; educational and career plans; parental income and education, ethnicity, and other demographic items; financial aid; and values, attitudes, beliefs, and self-concept. This report provides information that can be used for student assessment activities, accreditation and self-study reports, campus planning, and policy analysis. Separate profile reports are generated for first-time full-time freshmen, first-time part-time freshmen, transfers, and all respondents. Comparison groups in the first-time, full-time freshmen and all respondent reports are nationally-normed to reflect the American first-time full-time freshman population. Comparison groups in the first-time part-time freshmen and transfer reports are aggregated responses from the 2015 survey.

Comp 1 – The first comparison group is based on your institution's type, control, and selectivity.

Comp 2 – The second comparison group is based on your institution's type and control.

CIRP Construct – Items that are included in the measurement of a construct are indicated here.

Mean – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 4=Essential, 3=Very Important, 2=Somewhat Important, 1=Not Important).

Statistical Significance – Uses t-test to examine the difference between the mean score for your institution and the comparison group. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (*p< .05, **p< .01, and ***p< .001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is practically important. Large sample sizes (like those in the comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.

Effect Size – Determines the practical significance of the mean difference between your institution and the comparison group. It is calculated by dividing the mean difference by the standard deviation of the comparison group. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign indicates that your institution's mean is greater than the mean of the comparison group; a negative sign indicates your mean is smaller than the mean of the comparison group. Note that a negative effect size is sometimes preferred (e.g. a negative effect size on "How often during the past year did you come late to class" suggests fewer students at your institution reported this was the case).

Standard Deviation – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread over a larger range of response options.
